-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

Claims 1-3 and 6-10 are rejected under 35 U.S.C. 102(e) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over Specht et al. (US 6290159).

Specht et al discloses a seat belt retractor having substantially all the claimed features. The embodiment of figure 2 should be noted (see also column 2, first paragraph). Since the motor is described as being a variable energy absorber (column 4, line 21), it is deemed inherent that the motor is variable in torque/speed which is usually effected by a variable resistor such as a rheostat in series with the motor or, alternatively, the provision of rheostat in series with the motor to variably control the motor would have been obvious to a person having ordinary skill in the art as such is old and well known and Official notice of such is hereby taken. A gear train is deemed inherent such as in the coupling 20/21 or, alternatively, the provision of a gear train to couple the motor shaft to the spool would have been obvious to a person having ordinary skill in the art. The generated force is indirectly based on the weight of the occupant since the force exerted on the belt evaluated in evaluating device 26 is deemed proportional to the weight of the occupant.

Claims 4 and 5 are allowed as previously noted.
